

Helping Clients Create A Balanced Portfolio

Fixed-indexed annuities offer indexed strategies that provide growth potential without the risk of market loss. They also offer other benefits that might be missing from your clients' portfolios such as tax-deferred growth and the opportunity to receive guaranteed income for life.

The following chart shows how an S&P 500® or S&P 500 Risk Control indexed strategy may provide a smoother path of returns and help balance risk and growth opportunity in a portfolio.

Diversification may help to create balance in a portfolio, but it does not guarantee a positive outcome or protect against loss. This chart is one resource to help understand how diversification might affect a portfolio. It is a snapshot based on a combination of historical and hypothetical returns and assumptions.

The chart shows historical calendar-year returns for various asset categories, which are represented by the indexes identified in the legend. You cannot invest directly in an index. Index returns do not reflect fees and other expenses associated with investments in the underlying components of the index. Although risk factors vary by asset category and investment, generally higher returns are associated with greater risk.

The chart shows hypothetical calendar-year returns for two indexed strategies offered in fixed-indexed annuities issued by Great American Life.

- S&P 500 Indexed Strategy refers to a point-to-point indexed strategy with a cap that Great American Life offers with all of its fixed-indexed annuities. An indexed interest rate for this strategy is determined, in part, by the performance of the S&P 500 Index over a one-year term. The indexed interest rate for a term of this strategy will never be greater than the cap for that term. The hypothetical returns shown in the chart for this strategy were calculated using historical performance of the S&P 500 Index over calendar years and a hypothetical cap of 7%.
- S&P 500 Risk Control Indexed Strategy refers to a point-to-point indexed strategy with a participation rate that Great American Life offers with certain fixed-indexed annuities. An indexed interest rate for this strategy is determined, in part, by the performance of the S&P 500 Average Daily Risk Control 10% USD Price Return Index (Risk Control Index) over a one-year term. The indexed interest rate for a term of this strategy will always be a percentage of the index performance for that term. The hypothetical returns shown in the chart for this strategy were calculated using historical and hypothetical performance of the Risk Control Index over calendar years and a hypothetical participation rate of 75%.

Hypothetical returns for the indexed strategies are based on assumptions. A different set of assumptions would lead to different results, which could be significantly lower than the strategy returns shown in the chart.

- The strategy returns are based on index performance over calendar years. Actual strategy returns will be based on index performance over one-year terms that start on the 6th and 20th of each month.
- Returns for the Risk Control Index prior to April 4, 2013 are back-tested. Please see the Risk Control Index disclosure below for more information.
- The strategy returns are calculated using the same hypothetical cap or participation rate for each term. The cap or participation rate for a term of a strategy is set at the start of that term and may vary from term to term and by annuity product. The S&P 500 Indexed Strategy was first available in May 2005. Since then, caps have ranged from 3% to 9.75%. The S&P 500 Risk Control Strategy was first available in November 2015. Since then, participation rates have ranged from 40% to 80%. Future caps and participation rates may be higher or lower.
- Past performance of an index or strategy does not guarantee future results.
- The strategy returns do not reflect the effect of early withdrawal charges or market value adjustments that might apply and would reduce the strategy returns.

The S&P 500 Risk Control 10% Index refers to the S&P 500 Average Daily Risk Control 10% USD Price Return Index. The launch date of this index was April 4, 2013. For more information, **visit www.US.SPIndices.com and search keyword SPXAV10P**. Returns prior to the index launch date are back-tested. Back-tested performance is not actual performance, but is hypothetical. Back-tested returns were calculated using the same methodology that was in effect when the index was officially launched. Back-tested performance is subject to inherent limitations because it reflects application of an index methodology and selection of index constituents in hindsight. No theoretical approach can take into account all of the factors in the markets in general and the impact of decisions that might have been made during the actual operation of an index.
